1 About this version

Due to new live scouting of Basketball games the provided game data has changed and will be fully supported by this new version.

Bug fixes should increase the quality of provided game data.

2 Installation

2.1 Installation

See installation instructions.

2.2 Minimum System Requirements

- > System Processor: 2GHz or greater
- > System Memory: 1GB or greater
- > Free Disk Space: 200MB disk space
- > Operating System: Windows XP or greater
- > JRE: 1.6.0_16 (recommended for the best performance behavior)
- > Networking: Internet access

3 Version Compatibility

- > N/A

4 New Features

- > **Statistics** views are updated to only deal with available values
- > A **point confirmation** will improve the quality of the provided basketball score information
- > **Timeouts** are now summed up per **half time** in **basketball scoreboard**
- > The **settings** view for **basketball** is corrected to match the now available events
- > **New system messages** have been introduced to cover special circumstances in Basketball LIVE games

5 Dropped Features

- > N/A

6 Fixed Issues

- > Full play time for snooker games was displayed wrong under special circumstances
- > Supervisor and Odds views removed for sports where the data is not available
- > "Asian Live" view removed Odds view
- > Cancelled games are displayed correctly inside calendar
- > Snooker score update in details view corrected after frame ended
- > Update of teams during runtime had no impact within the details view
- > If a game was stopped but reopened the event list is now initially updated
- > Update of game development chart inside of details window improved (consideration of time adjustments)
- > Background coloring of basketball games in dangerous state corrected

7 Known Issues and Limitations

7.1 Known Issues

- > When opening a huge number (75 above) of current ticker details window the application might crash.
- > When logged in for a long period while constantly adding games the memory usage will grow and reaction of the graphical user interface may becomes slower. Restart or re-login is recommended in that case.

7.2 Limitations

- > N/A
