1 About this Version

This version contains several features for our various supported sports and some bug fixes as well which will increase the quality of the provided game data and the usability of the client.

2 Installation

2.1 Installation

See the installation instructions in the document *RunningBall Trader Client – Quick Start Guide*.

2.2 Minimum System Requirements

- > System Processor: 2GHz or greater
- > System Memory: 1GB or greater
- > Free Disk Space: 200MB disk space
- > Operating System: Windows XP or later
- > JRE: 1.6.0_16 (recommended for the best performance behaviour)
- > Networking: Internet access

3 Version Compatibility

- > N/A

4 New Features

- > New **miss events** for Basketball.
- > New **jump ball events and possession change** in Basketball.
- > New **rebound (offensive & defensive), steal and turnover** events in Basketball.
- > **Possession change and rally count** added for Volleyball and Beach Volleyball.
- > **New indicator** which shows us the designated date range in **Live View**.
- > New **filter and sort date/time** in the **Book View**.

5 Dropped Features

- > N/A

6 Fixed Issues

- > When sorting games in Live View the league header remained when finished games were removed

7 Known Issues and Limitations

7.1 Known Issues

- > When opening a huge number (75 and more) of detail windows for running tickers, the application may crash.
- > When logged in for a long period while constantly adding games, the memory usage will grow and the reaction of the graphical user interface may slow down. A restart or re-login is recommended in that case.

7.2 Limitations

- > N/A
